AMENDMENT

Sir:

In response to the Office Action of January 2, 2003, the following amendments are presented:

In the Claims:

Claim 1 is presented as follows in re-written "clean" format:

*Sub. C1*

-- 1. (Amended) A circuit breaker for an electrical circuit comprising:  
an operating mechanism for interrupting current in the electrical circuit when operated;  
an electronic trip unit including a microcomputer which monitors the current in the electrical circuit and generates a trip by automatically operating the operating mechanism to interrupt the current in the electrical current when the current exceeds a selectable value; and,  
a rating plug having means establishing the selectable value of the current at which the electronic trip unit trips the operating mechanism, and a non-volatile memory storing frame rating and current rating of the circuit breaker. --
